Desert Screen - The projection screen for EVERY application

Special requirements demand special solutions. AV Stumpfl developed a mobile projection screen conjoined with a projector mount, which is suitable for use at untypical places. With the stable Monoblox64 profile frame and according projector arms for the installation of short throw projectors directly to the screen, this product is ready for any job. Maximum stability combined with high product durability meet again our system philosophy.

Panorama multidisplay projection

Short-throw projectors fixed on projector arms

Field operation Dutch Airmobile Brigade

The Desert screen consists of a foldable Monoblox64 frame with automatically engaging snap joints. The special type AT32/64 legs give the screen a perfect hold. The additional anti-sway braces to the frame bottom and center supports secure, despite additional weight load, maximum frame stability. For an easy and flexible mounting of short-throw projectors a specific overhead - projector arm has been designed which can be attached simply and quickly to the back of the frame. The special projector mounting brackets can be positioned stepless along the projector arms according the required distance. The flexible and foldable front projection surface is attached to the frame via snap fasteners quick and easy.
